Control what your *AI agents* spend

Set budgets, permitted recipients, and approvals for your agents. **Conto checks payment requests against your rules.** Connect your agent's payment tools.

THE PROBLEM

An agent can request more than its budget or pay the wrong recipient. A budget written in a prompt cannot stop the wallet from sending money.

THE SOLUTION

Conto returns **approved, blocked, or needs approval**. Your payment system acts on the decision and reports the result.

APPROVED

Within the rules

Requests that pass all spending rules can proceed.

NEEDS APPROVAL

Needs approval

Payments above a review threshold wait for a person.

BLOCKED

Blocked requests

Hard limits and blocked recipients stop the request.

CORE CAPABILITIES

Spending rules

Check amounts, recipients, categories, payment frequency, and trust.

Approvals

Review requests by email or in the dashboard.

Payment records

Keep the agent, recipient, decision, and payment status together.

Payment options

Stablecoins and connected cards.

Team roles

Choose who can set rules, review requests, and send payments.

WHERE TEAMS USE IT

Use Conto when agents buy services, send payments, or pay for API calls.

SPEND

Procurement and vendor controls

Keep purchases within approved vendors, categories, and budgets.

MOVE

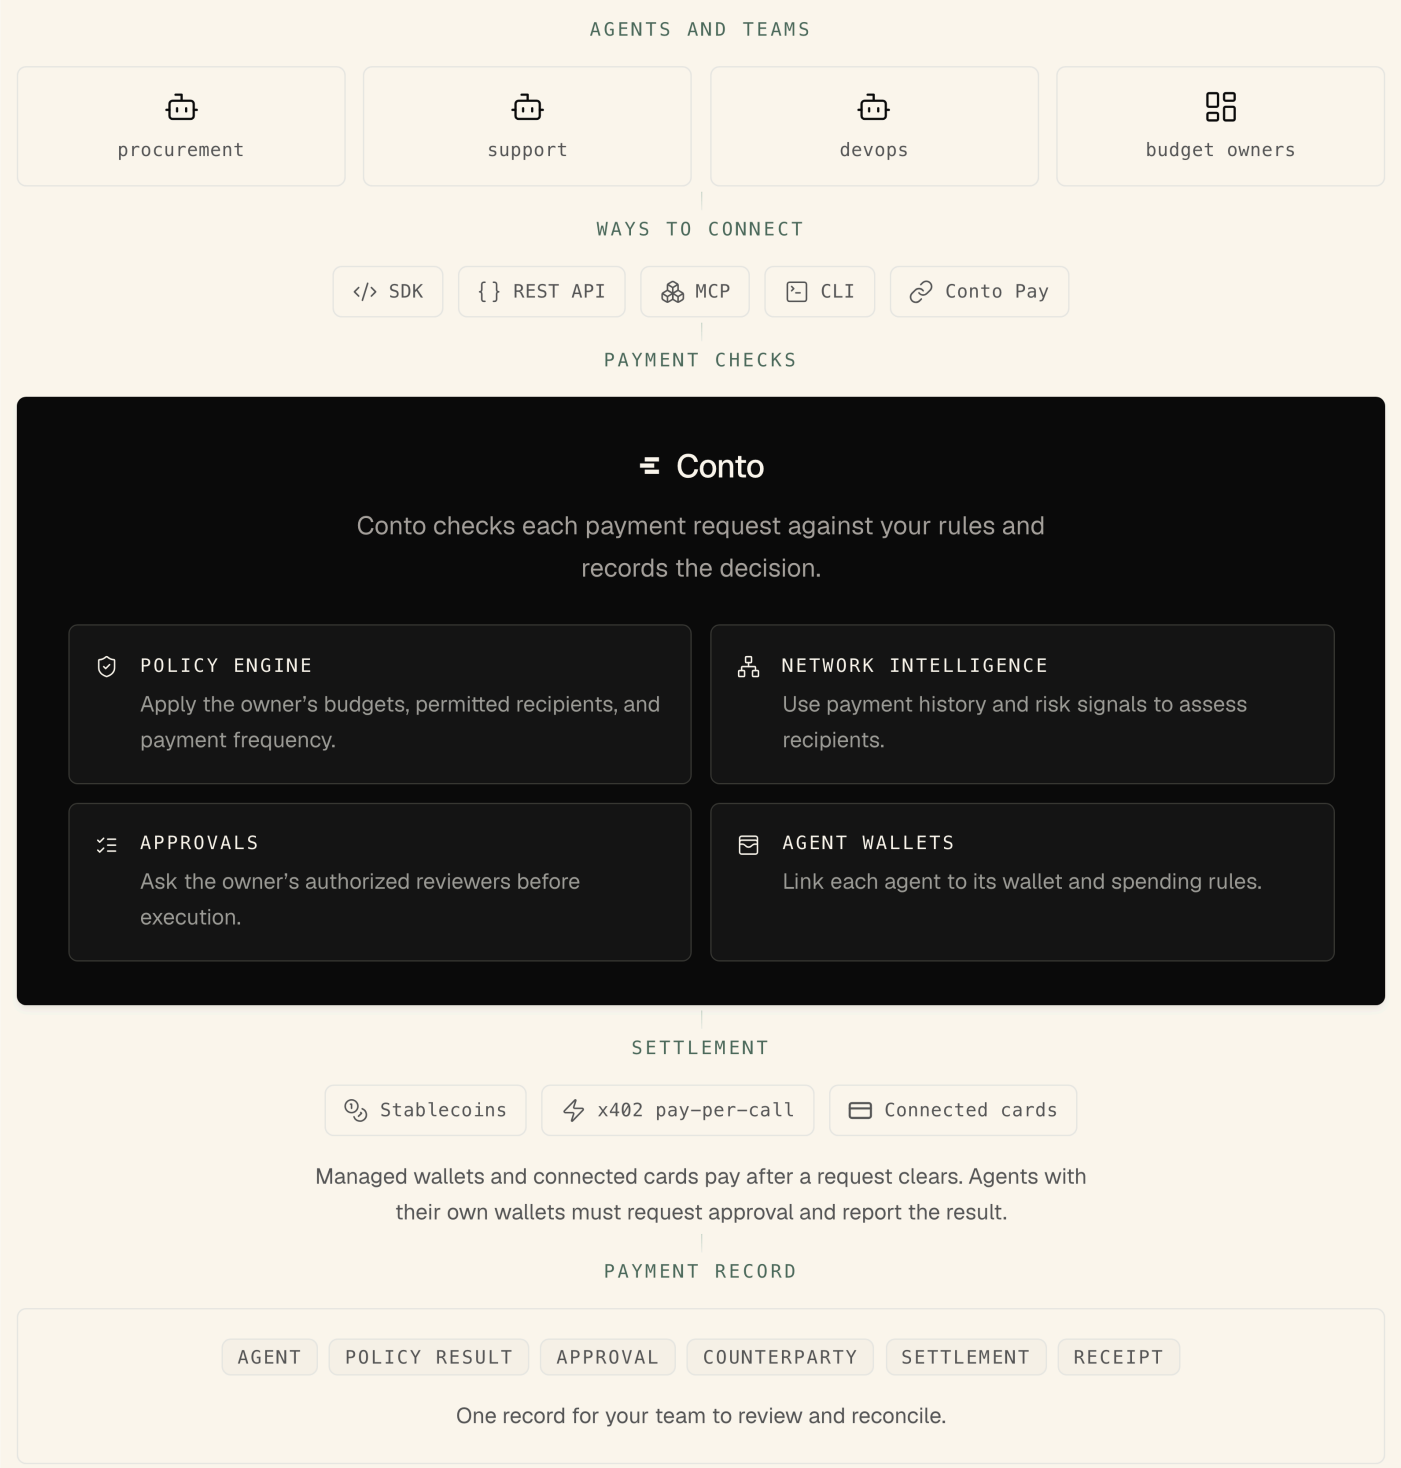
Payouts, refunds, and credits

Pay when work is complete. Hold larger requests for approval.

METER

x402 and service spend

Set a maximum per call, a session budget, and a daily service budget.

HOW CONTO FITS TOGETHER


The owner sets rules, the agent submits a request, and the payment system requires authorization before sending. The recipient receives the payment through a supported method.
